Reasons for Allowance

1. Claims 1-28 are allowed as the prior art does not teach or suggest the applicant's invention. Claim 1 teaches a method for filtering a servo signal in a tape drive. The distinguishing element of the claim is the selection of a digital filter coefficient that depends upon the tape velocity and the coefficient's use to produce a filtered servo signal.

Claim 10 teaches a system for controlling a position of a tape head. The distinguishing element of the claim is a processing element coupled to the velocity sensor, wherein the processing element selects digital filter coefficients that depend upon the tape velocity; and a digital filter coupled to the processing element, wherein the digital filter filters the servo signal using the digital filter coefficients to produce a filtered servo signal.

Claim 22 teaches a tape drive. The distinguishing element of the claim is a processing element coupled to the velocity sensor, wherein the processing element selects digital filter coefficients that depend upon the tape velocity; and a digital filter coupled to the processing element, wherein the digital filter filters the servo signal using the digital filter coefficients to produce a filtered servo signal.
